## Single Spindle Sliding Headstock CNC

**Single spindle turning** machines can be used for the mass production of a wide variety of high precision parts as well as for smaller production batches – due to its extremely short preparation time. In all cases single spindle turning machines stand out for their high productivity

**A specific, focused response to your needs**

We have equipped a **Metrology Zone** right beside the machining area. This allows our highly qualified Metrology team to carry out a variety of verification, checking and measurement tasks, which enables us to achieve our objectives to the highest standards on behalf of our clients.

**A specific, focused response to your needs**

We complement our manufacturing with secondary operations: industrial part cleaning and degreasing machine, vibrator, remove spike from parts, finish thread of parts...
