Uchiyama Manufacturing de Yucatán S.A. de C.V.

Uchiyama Yucatán is the newest facility of Uchiyama group and it is located in México to satisfy North América & South América markets. The products that Uchiyama Yucatán produces are Dynamic Seals and & Rubber Gaskets.

About Us

In 1898, our company was founded as the Uchiyama Cork-Stopper Factory and began production of cork stoppers. Since then, it has developed a great many cork products and has grown into a top manufacturer in the cork industry. During this period, synthetic rubber and synthetic resin production divisions were added and presently gaskets and sealing materials for cars and industrial machines are our mainstay.

Quality Policy

With constant awareness of improvements in the "quality of human resources", "quality in work" and "quality in products", we provide products and services which satisfy customers around the world.

Production of higher quality products begins with our in-depth material research.

Our challenge is to pursuit of new possibilities to support a "comfortable human life".

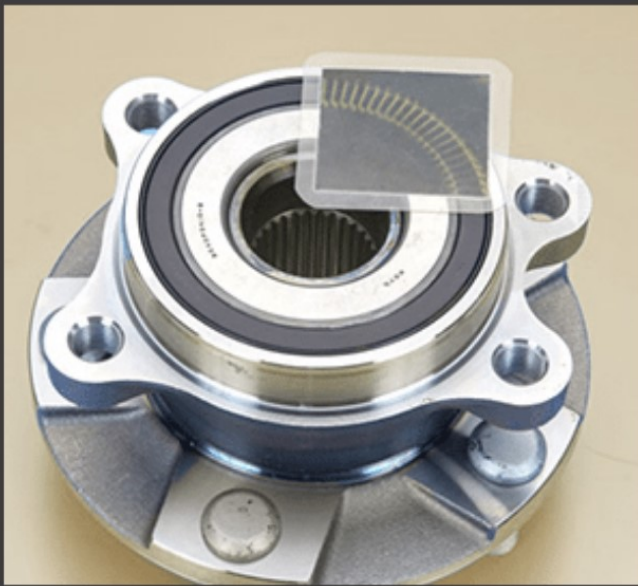

The most prepared and trained staff. Better training means better process.

UCHIYAMA MANUFACTURING CORP.

SEALS

There are a lot of parts rotating in a car's engine and wheels. In order to support rotation, bearings are necessary. Seals attached to the bearings play a vital role in preventing grease leakage and the penetration of foreign matter. With our advanced technology, we can offer the ideal seals.

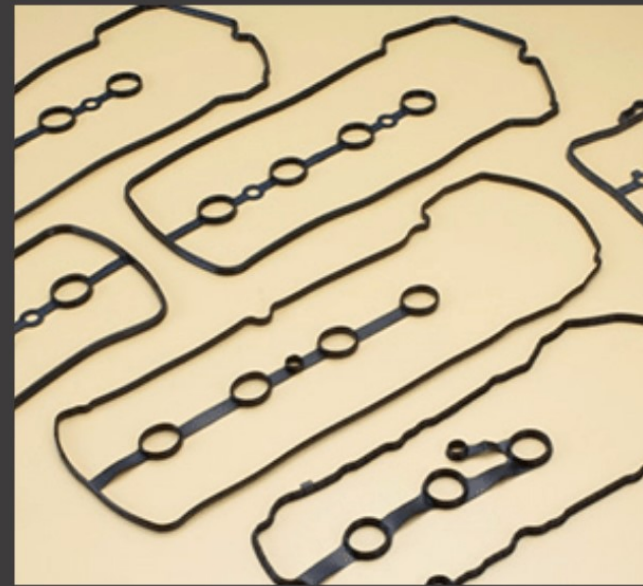

PRODUCTION DEVELOPMENT & DESIGN

We consistently promote Material Development, Product Design, Reliability Evaluation, according to Requested Specification.

CORK

Cork is used as floor material because of sticking to its friendliness. To a living house flooring is an important part to support livelihood. However, one is apt to have an eye to other things, such as walls and fixtures.

GASKETS

With the evolution of engines, gaskets have also evolved into highly durable products. We offer weight reduction, modularization, and energy savings through our gaskets and plastic parts.

Uchiyama's rubber materials:
EPDM, ACM, AEM, VMQ, FVMQ, HNBR, NBR, FKM.
