in the North American Auto Industry

Full-Service Assembly Solutions

Our solution-driven culture and commitment to operational excellence are our greatest strengths, allowing us to execute on our customers' vision quickly and efficiently. Our people design and innovate processes using cutting-edge technology that result in sustainable solutions, including:

New Product Launch Management

Assembly services, development and implementation of operating procedures and inspection verification, new model / engineering change management capability, process development & feedback on design for prototype and pre-production trial coordination through final approval, and continuous engineering changes to include cost reduction through design for manufacturing feedback (Cradle to Grave)

Quality Engineering

Product sorting and containment, process control design and implementation, problem solving & root cause analysis, ongoing process audit, and inspection

Production Management & Control

Forma's experience in production management, operational discipline, and FMDS- & KPI-driven continuous improvement ensure all assembly processes run smoothly and efficiently

Tier-n Supplier Management

Forma's experienced Quality Assurance and Logistics team can assist in improving your manufacturing processes along with those of your suppliers

Rework and Repair

We work to determine if your product can be reprocessed in a prior sequence or brought back into conformance through additional methodologies

Product Sorting and Containment

Forma provides highly capable, trained team members at one or more of your locations to effectively solve quality problems with minimal disruption

Kitting and Sequencing

Services include sorting, packing, product bagging, hardware kit assembly, folding carton assembly and labeling

Finished Goods Inspection

Compliant with your quality system, Forma's quality teams can deliver final goods inspection using the most effective and efficient processes
