

## OUR COMPANY

With more than 50 years of experience in the field of racks and storage systems we are committed to offer the best service to our clients who are looking to equip a full warehouse with racks, add up some sections to current storage area, purchase accessories, safety products or reorganize warehouse space.

Strategically located in the border of México and the United States we are able to serve clients from both sides of the border.

We work with different brands of industrial racks including our own to offer the best quality and least lead time.

## RACKS

### Selective

The most used system for palletized products, selective racks are designed to store products at different heights and take advantage of vertical storage space.

### Drive in

Designed for LIFO inventory control Last In -First Out, it is used for homogenous or low-rotation products. Easy forklift access reducing aisles between racks, uses both length and height available.

### Gravity Racks

Designed for FIFO inventory control, using both sides of the rack to load and unload material. It works with rollers that use gravity to slide pallets.

### Push back

Designed to store pallets horizontally, one pallet in front of the other. LIFO inventory control Last in -First out. Same aisle for loading and unloading. Take advantage of long storage space instead of height.

### Cantilever

Cantilever system is ideal for long loads such as tubes, profiles, wood, metals sheets etc. It offers the option to load at one side or both sides. Works for light and heavy weight.

## OTHER PRODUCTS AND SERVICES

- LOCKERS
