

Turn data into better decisions

We are high technology providers, specialists in design,
data acquisition and custom development.

Who we are

We want to prove how technology adds value to customers, employees and shareholder.

Mision

To help out customer grow through innovative solutions and high-quality products and services.

Vision

Being known as a leading and innovative company for its quality products and services. Eager to add value to our customers, employees, and shareholders.

Value

We are proud to belong to **PID ELECTRONICS**, where we enjoy teamwork; putting it alongside quality, honesty, humility, and recognizing the contribution of our collaborators.

What makes us different

We understand the problems that the manufacturing industry has, we speak the language and we fully understand what the client wants. We see ourselves as translators, we verbalize the problem to produce a solution.

Our team is very experienced and highly certified and trained personnel, who have experience in digital transformation:

Software development

- Applications
- Graphics
- Ways to automate processes
- Platforms

Electronic hardware development

- PCB boards
- Clusters and others

Research and interview

We start with an exhaustive research so we can identify your current needs with precision.

Architecture designing

Start developing

Prototyping

Optimizing

Testing and validating

Scaling the benefits

Once optimized, the product is finished and ready for large-scale deployment. Thanks to our process the output of your resources is maximized.

Agile Scrum

Lean Logistics

What we do

We are interested in offering customized and comprehensive hardware and software solutions.

At the beginning, we start from the most pressing needs of your organization. And from them, we determine which are the elements that we will design: software, hardware, in any form. You can rely on the different skills of our team members.

Software

We design and develop the software you need

Prototyping

We develop your prototype

Electronic design and PCB Manufacturing

We design and manufacture tools that your project needs

Nearshoring Services

We offer skilled and professional team to develop your projects.

We are AWS partner and certified consultant

Data base administrator

Project Manager Agile

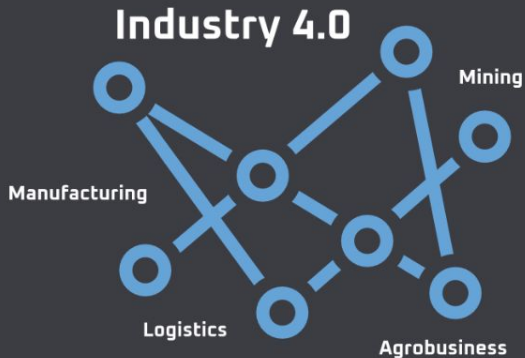

High level course training

Electrical Testers

In which industries we work

We have specialized in the industrial and manufacturing, mining, oil, smart cities and agrobusiness areas.

**"What is not measured,
is not improved"**

We have proven our ability to offer effective services in different industries. They may look different, but they have faced almost the same challenge: the unreliability of the data they collect. Once our clients begin to collect reliable data, the quality of decisions improves and consequently increases their productivity, quality and profitability.

Specific product for your company

Our knowledge about different industries and our passion to keep developing solutions have inspired us to create this 4 out of the shelf solutions. Every solution offers you reduce waste, grow profit and increase quality
