WHO WE ARE

We are a group of experts who offer high quality integrated solutions to your specific logistic requirements.

With more than 20 years in the border area.

Logistics the art and science of obtaining, producing and distributing material and product in the right place, in proper quantities and at right timing.

ONE TEAM
LOGISTICS

We are in the top 3 industrialized border cities for the USA and foreign manufacturers in Mexico, and another one of the most industrialized states in the interior of the country.

PRESENCE

We have binational Presence. We know that the phenomenon of the border cities of the north of Mexico, within the present globalizing expression, has a unique performance by the situation of the localities, its population volume and its functionality in the economy.

WMS Framework

Velocity WMS

Warehouse Processes

Receiving

The receiving module in Velocity WMS was designed for fast and efficient entry of goods into your warehouse. Perform all of your receiving and put-away tasks on just one screen without having to drill-down into other screens.

Order Fulfillment

The order module in Velocity WMS allows orders to be created by warehouse personnel or customers. Inventory is allocated or committed as soon as the items are placed on the order to keep real-time inventory information up to date and minimize stock outages.

Shipping

The shipping module in Velocity WMS provides for quick and efficient shipping of goods out of your warehouse. Items from orders are automatically imported into a shipment to reduce the amount of data entry needed. When items are shipped, the committed inventory is automatically decremented keeping your real-time inventory information up to date.

Inventory Control

The inventory control module in Velocity WMS gives you real-time visibility into the stock levels of the goods in your warehouse. Easily view product information, adjust inventory levels, move inventory, or change the status of items.
