CO-ENGINEERED COMPONENTS THAT CHANGE WHAT'S POSSIBLE

CO-ENGINEER YOUR MISSING PIECE

It starts with a conversation.

We listen to understand your system's performance compromises, then, together, combine expertise to bring a fresh perspective to component design.

IN OUR INNOVATION PLAYGROUND

The innovation playground is where creativity meets precision.

You'll have access to unique materials, rigorous testing, and rapid prototyping to facilitate full performance testing.

WE DELIVER COMPONENTS THAT MAKE IT POSSIBLE

From initial design concept to final production.

There are no standard shapes and sizes, every component is custom designed for mechanical motion applications.

Customized Bearings

Our tailor-made bearings can be manufactured in all sorts of shapes and sizes. With numerous combinations of metal backings, polymer compound layers and interlayers.

Engineered Fasteners

An EQYO custom-made fastener is a non-permanent fastener for complex systems with multiple performance needs.

Precision Components & Assemblies

High precision injection molded components in any shape or size - unmatched precision for safety critical applications.

Customized Seals

Friction, wear, leakage or speed - your EQYO polymer or metal seal will be custom designed to meet your specific engineering challenges.

Torque Components

EQYO Torque Components are designed to deliver personalized torque performance, seamlessly integrating into your existing systems.
