Space heritage

EUCLID is a space-borne survey mission dedicated to investigating the origin of the Universe's accelerating expansion and the nature of dark energy, dark matter, and gravity.

JUICE - Jupiter ICy moons Explorer - is the first large-class mission in ESA's Cosmic Vision 2015-2025 program. This mission will spend at least three years making detailed observations of the giant gaseous planet Jupiter and three of its largest moons, Ganymede, Callisto, and Europe.

The primary goal of **PLATO** (PLAnetary Transits and Oscillations of stars) is to open a new way in exoplanetary science by detecting terrestrial exoplanets.

The **AWS** - Arctic Weather Satellite mission will provide frequent coverage of Earth for improved nowcasting and numerical weather prediction.

LSTM, Land Surface Temperature Monitoring - The Copernicus Land Surface Temperature Monitoring, LSTM, mission will carry a high spatial-temporal resolution thermal infrared sensor to provide observations of land-surface temperature.

And more is being prepared beyond our imagination...
