neoProtect

Synthetic Leather & Textiles

- REACH compliant
- Manufactured in Mexico
- Vast experience in Export Market

neoProtect is the set of technologies and treatments used in our materials that make them highly resistant to abrasion, without affecting their soft touch and design features.

neoProtect prevents pigments such as pen and permanent marker ink from penetrating the surface. Thanks to neoProtect, ink can be removed easily and without affecting the original color.

neoProtect is integrated into neoTek from the outset of the manufacturing process, therefore it does not degrade with the passage of the time.

neoProtect

High abrasion
resistance

Flame retardant

Resistant to household
cleaning products

Suitable for sewing

neoSafe

Our materials are treated with neoSafe technology, which delays ignition, exceeding multiple international standards.

neoFresh

Our materials are resistant to sunlight and UV rays, low temperatures, as well as mildew and bacteria.

Resistant to household cleaning products

UV Resistant

Antibacterial

Repellent

Waterproof

Flame retardant

neoProtect prevents spots from penetrating and remaining fixed on the surface.
