

About Carter

For three generations, the Carter family of companies has been evolving to meet the demands of an ever-more-connected world. What began as a modest, family-owned dealership in 1957 eventually developed into a trucking company and then into a public and globally owned logistics powerhouse with clients located worldwide. Carter offers end-to-end supply chain management with a network that spans North America, including a strong Intra-Mexico operation. Carter's 800 tractors, 1600 trailers, and technology-driven crossdocks provide value that is unparalleled in logistics.

Our Services

Carter built its foundation in trucking but is now a high-tech, results-orientated supply chain company. Carter is dedicated to innovation and marries the latest technology and data with a large, asset-based operation in the US and Mexico. Carter's experienced analyst team makes continuous improvement and shared solutions a way of life. This drives cost containment solutions for our customers, some of the largest manufacturing companies in the world.

Logistics Services:

- Shared Milkrun
- LTL/Truck Load Services
- Supply Chain Management
- 3PL
- In-Plant Logistics
- Last-Mile Logistics
- Crossdocking
- Expediting
- Intra-Mexico & Importing/Exporting
- Global Solutions

The Carter Shared Milkrun Advantages

The Shared Milkrun allows your parts to “share a ride” with other customers’ products while cutting your shipping costs.

Reduce Freight Damage

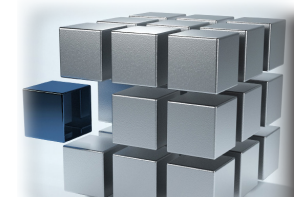

Receive Every Part, Every Day

Reduce Carbon Footprint

Higher Cube Utilization

Reduce Space & Labor Costs

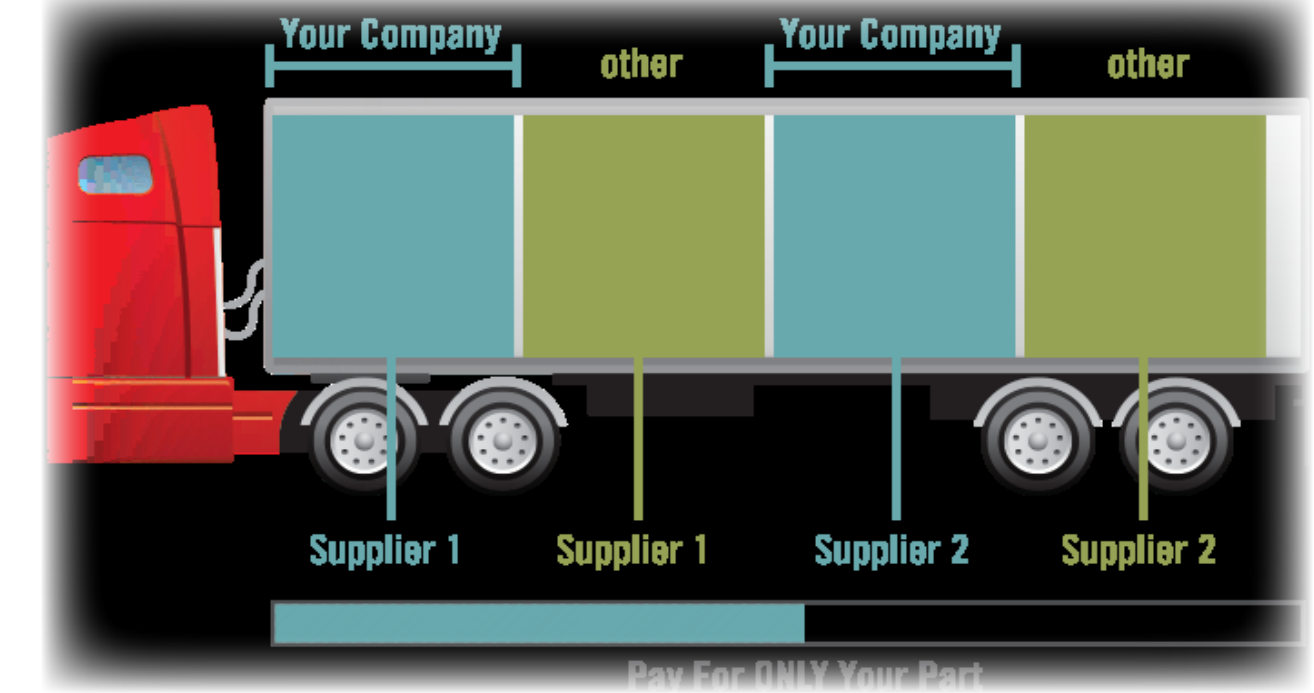

Improve Management of Returnables

Shared Milkrun With Carter's Network

How It Works

The Carter Shared Milkrun Network is a unique logistics model designed to support lean initiatives by combining freight from our international client base and thousands of suppliers into a single supply chain solution. One of the pillars of Carter's success is our “Split-Bill” methodology, which allows our clients to fairly split the overall cost of dedicated Milkrun routes.

Committed to continuous improvement, our analysts run weekly route optimization to ensure your shipments travel in the most efficient manner. As suppliers and or/manufacturing plants add weight to the network the cost per pound decreases for all participating clients.
