Visible Inventory

Since its founding in 1982, PENCOM has worked to assist in the design process, knowing that it is here that a customer's components needs are defined. Employing a "Value Engineering" approach, PENCOM's goal was to find or create the least expensive, best functioning design solution. By offering this approach to design problems, PENCOM proved to be a valuable resource to design engineers. PENCOM's extensive knowledge of standard "off the shelf" products allows it to suggest these components first. When an application required a more complex solution, PENCOM would employ its internal design capabilities to create a custom component.

- Pencom is a Global Mechanical Components Solution Company
- Inventory is held for all of PENCOM's key customers.
- We can ship to all of our customers on a next day service.
