

Additive Manufacturing for the industry 2024

## Our Customers

BOYD

CORPORATION

## Our Manufacturing Services

### 3D Printing

- METAL Direct Metal Printing
- FDM (filament) and SL∧ (resin)
- Serialized production and prototyping
- Training and counseling

#### Mechanical design

- Fixture, tooling, mold, mechanisms, machines
- FEA analysis (mechanical simulation)

#### CNC machining

• 3 axis CNC milling (stainless, aluminum, titanium, tool steel...)

#### Reverse engineering

3D scanning and CAD model generation

### Metals & Plastics Heat treatment

- Stress relief
- Aging
- Annealing

3DSystems DMP Flex 350

Stratasys F170 & F370

Modix BIG-120X

3D Scanning

Formlabs Form 3

HAAS VF2 3-axis

Nabertherm NA 250/85

## Metals $\Lambda M$ @ Border Prototypes

## 3DSystems DMP Flex 350

- [275 275 420]mm build volume
- Dimensional accuracy up to ±0.1% with features as small a 0.200mm

### **Materials**

- Steels [316L\* 17-4PH 1.2709...]
- Aluminum [ALF357 AlSi10Mg]
- Nickel [IN718 HX...]
- Titanium [Ti64...]
- Cobalt Chrome

\*316L readily available

# CNC machining @ Border Prototypes

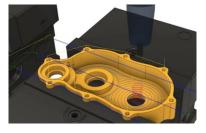

## HAAS VF2

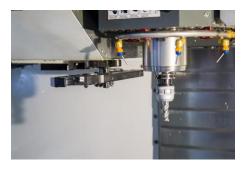

- [760x 400y 508z]mm axis travel
- 3 axis, with 4<sup>th</sup> and 5<sup>th</sup> axis available prior consultation

## Materials we handle

- Stainless & tool steels
- Aluminum alloys
- Titanium alloys
- Plastics [POM]

## Metals **\( \Lambda M \)** at Border Prototypes

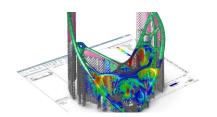

### Pre-processing

CAD, FEA Thermal & Mechanical simulation and print preparation

### **3D Direct Metal Printing**

In-situ Optical tomography quality assurance process monitoring

State of the art 3DSystems
DMP 350 Flex

### Post Processing

Inert gas Heat treatment

Sanding/polishing

End to end processing in-house

## Plastics **AM** at Border Prototypes

### FDM Systems

- Stratasys F170 & F370 (End User Production)
- Modix Big 120x (Large Format FDM)
- Ultimaker Method X (Prototyping, custom materials)

FDM Materials [ $\Lambda$ BS  $\Lambda$ BS-CF  $\Lambda$ BS-PC  $\Lambda$ S $\Lambda$  PL $\Lambda$  P $\Lambda$ 12 P $\Lambda$ 6-CF]

- Formlabs Form 3+ fleet (Prototyping, End User production, low to mid volume production)
- Formlabs Form 3B (Medical)

All Formlabs Resins available and in stock

SLS (Powder) and MFJ printing services available prior consultation

# Equipment specs summary

Machine	Technology	Build Volume [x y z] (mm)	Accuracy	Materials
Formlabs Form3 (5x)	SLA	[145 145 185]	±0.025 mm High Accuracy end user parts	Draft, Tough, Flexible, Rigid, High Temp, Biomed (FDA compliant), Standard (clear, colored)
Stratasys F170	FDM	[254 254 254]	±0.200 mm End user, high repeatability <b>production</b> <b>grade</b> parts	PLA, ASA, ABS, ABS/CF, TPU 92A, Diran 410Mf07, ABS-ESD, PC-ABS, PA12, PA6
Stratasys F370		[355 254 355]		
Makerbot Method X		[152 190 193]	±0.200 mm High accuracy <b>specialty materials</b>	
Modix Big 120x		[1200 600 600]	±0.600 mm  LARGE build volume, many materials	
3DSystems DMP Flex 350	DMP	[275 275 420]	±0.1% with features as small a 0.200mm High accuracy production metal parts	<b>316L Stainless steel</b> More materials available
HAAS VF2	CNC	[760 400 500]	3 axis (4 and 5 available prior consultation), typical accuracy ±	Stainless & tool steels, aluminum, titanium, POM
